

## 5-YEAR REVIEW

Short Form Summary

**Species Reviewed:** *Cyanea kolekoleensis* (hāhā)

**Current Classification:** Endangered

### **Federal Register Notice announcing initiation of this review:**

[USFWS] U.S. Fish and Wildlife Service. 2020. Endangered and Threatened Wildlife and Plants; Initiation of 5-Year Status reviews for 129 Species in Oregon, Washington, Idaho, Hawaii, Montana, California, and Nevada. Federal Register 85(48): 14240–14243, March 11, 2020.

### **Lead Region/Field Office:**

Interior Region 12/Pacific Islands Fish and Wildlife Office (PIFWO), Honolulu, Hawai‘i

### **Name of Reviewer:**

Cheryl Phillipson, Biologist, PIFWO

Lauren Weisenberger, Plant Recovery Coordinator, PIFWO

Megan Laut, Conservation & Restoration Team Manager, PIFWO

### **Methodology used to complete this 5-year review:**

This review was conducted by staff of the Pacific Islands Fish and Wildlife Office (PIFWO) of the U.S. Fish and Wildlife Service (Service or USFWS) beginning in October 2021. The review was based on a review of current, available information since the last 5-year review for *Cyanea kolekoleensis* (USFWS 2017). The evaluation by Cheryl Phillipson, Biologist, was reviewed by Lauren Weisenberger, Plant Recovery Coordinator, and Megan Laut, Conservation and Restoration Team Manager.

### **Background:**

For information regarding the species’ listing history and other facts, please refer to the Fish and Wildlife Service’s Environmental Conservation On-line System (ECOS) database for threatened and endangered species (<https://ecos.fws.gov/ecp/species/8950>).

### **Review Analysis:**

Please refer to the previous 5-year review for *Cyanea kolekoleensis* published in the Federal Register on September 13, 2017 (available at [https://ecos.fws.gov/docs/tess/species\\_nonpublish/2419.pdf](https://ecos.fws.gov/docs/tess/species_nonpublish/2419.pdf)) for a complete review of the species’ status, threats, management efforts, and references cited. We are not aware of any significant new information regarding the species’ biological status since listing to warrant a change in the Federal listing status of *C. kolekoleensis*.

This short-lived perennial shrub in the Campanulaceae (bellflower) family is listed as endangered and is known from the island of Kaua‘i. The status and trends for *Cyanea kolekoleensis* are provided in the tables below.

New Status Information:

- *Cyanea kolekoleensis* was last observed in 1998 and has not been relocated (Wood et al. 2019, p. 4; Kishida and Wood 2015). Wood et al. (2019, p. 4) assess this species as possibly extinct in the wild. Experts believe there is still suitable habitat to survey and these surveys are conducted as time permits.

New Threats:

- None reported.

New Management Actions:

- None.

**Table 1. Status and trends of *Cyanea kolekoleensis* from listing through current 5-year review.**

<b>Date</b>	<b>No. wild individuals</b>	<b>No. outplanted</b>	<b>*Preventing Extinction Criteria identified by HPPRCC</b>	<b>*Preventing Extinction Criteria Completed?</b>
2010 (listing)	0	0	All threats managed in all 3 population	No
			Complete genetic storage	No
			3 populations with 100 mature individuals	No
2017 (5-year review)	0	0	All threats managed in all 3 population	No
			Complete genetic storage	No
			Reproduction (i.e., viable seeds, seedlings) at all 3 populations	No
			3 populations with 100 mature individuals	No
2022 (5-year review)	0	0	All threats managed at all 3 populations	No
			Complete genetic storage	No
			Natural reproduction at all 3 populations	No

			3 populations with 50 mature individuals	No
--	--	--	--	----

\* The Preventing Extinction Stage was established in 2011. Prior to 2011, the Interim Stabilization Stage was the first stage towards recovery (now it is the second stage after Preventing Extinction).

**Table 2. Threats to *Cyanea kolekoleensis* and ongoing conservation efforts.**

Threat	Listing factor	Current Status	Conservation/ Management Efforts
Degradation and destruction of habitat by feral ungulates	A	Ongoing	None
Established ecosystem altering invasive plant species degradation of habitat and competition	A, E	Ongoing	None
Landslide destruction and degradation of habitat	A	Ongoing	None
Climate change degradation and loss of habitat, including hurricanes	A	Ongoing	None
Predation and herbivory by rats	C	Ongoing	None
Predation and herbivory by invertebrates—slugs	C	Ongoing	None
Reduced viability due to low numbers	E	Ongoing	None

**Synthesis:**

Currently there are no known individuals of *Cyanea kolekoleensis* on Kaua‘i. Experts believe there is still suitable habitat to survey and these surveys are conducted as time permits. There is no direct threat control for this species. No propagative or genetic materials are in collections for storage or propagation.

Stabilizing (interim), downlisting, and delisting objectives are provided in the Kaua‘i Islandwide Recovery Plan (USFWS 2021) and have been updated according to the draft revised recovery objective guidelines developed by the Hawai‘i and Pacific Plants Recovery Coordinating Committee (HPPRCC 2011). The HPPRCC identifies an additional initial objective, the Preventing Extinction Stage, in addition to the Interim Stabilization, Delisting, and Downlisting objectives. Furthermore, life history traits such as breeding system, population size fluctuation or decline, and reproduction type (sexual or vegetative), have been included in the calculation of goals for the number of populations and reproducing individuals for each stage. The goals for each stage remain grouped by life span defined as annual, short-lived perennial (fewer than 10 years), or long-lived perennial.

*Cyanea kolekoleensis* is a short-lived perennial shrub. To prevent extinction, which is the first milestone in recovering the species, the taxon must be managed to control threats (e.g., fenced) and have 50 individuals (or the total number of individuals if fewer than 50 exist) from each of three populations represented in *ex situ* (secured off-site, such as a nursery or seed bank) collections that are well managed. In addition, a minimum of three populations should be documented on Kaua‘i where the species occurred historically and these populations must be naturally reproducing (i.e., viable seeds, seedlings) with a minimum of 50 mature, reproducing individuals per population.

The preventing extinction goals for this species have not been met. Currently, there are no known individuals (Table 1), no genetic representation, and all threats are not being managed (Table 1, Table 2). Therefore, *Cyanea kolekoleensis* meets the definition of Endangered as it remains in danger of extinction throughout its range.

### **Recommendations for Future Actions:**

No new threats and no significant new information regarding the species’ biological status have been reported since the last 5-year review in 2017. Thus, the following recommendations for future actions are reiterated or updated for the 5-year review for 2022.

- Surveys and inventories—Continue to survey the geographic and historical range of *Cyanea kolekoleensis* for any populations.
- Ungulate monitoring and control—If plants are located, construct small scale fences around individuals to protect *C. kolekoleensis* from the negative impacts of feral ungulates.
- Nonnative invasive plant monitoring and control—If plants are located, control established ecosystem-altering nonnative invasive plant species at any populations found.
- Climate change adaptation strategy—Research the suitability of habitat for reintroduction of *C. kolekoleensis* taking into consideration the impacts of climate change.
- Predator and herbivore monitoring and control—Implement effective control methods for slugs and rats at any populations found.
- Captive propagation for genetic storage and reintroduction—Collect material for genetic storage and propagation for reintroduction from any individuals found.
- Build resiliency and redundancy—Increase numbers of individuals and populations through historic range to reduce impacts of landslides and hurricanes.
- Alliance and partnership development—Continue to work with partners and other land managers in planning and implementation of ecosystem-level restoration and management to benefit this species.

**Pre-1996 DPS listing still considered a listable entity?**   N/A  

**Recommendation resulting from the 5-year review:**

- Delisting
- Reclassify from Endangered to Threatened status
- Reclassify from Threatened to Endangered status
- No Change in listing status

**For Field Supervisor, Pacific Islands Fish and Wildlife Office**
